# HELP PROTECT YOUR HOME IN 3 EASY STEPS

TRUSTED INTERNET®

ABOUT US

## WHO WE ARE

Trusted Internet is an established provider of comprehensive Cyber Security solutions, comprised of experienced Virtual CISO™ staff, former large enterprise cyber security and compliance consultants, and our own 24/7 Cyber Security Operations Center.

### IF YOU GET HACKED AT WORK, YOU WILL BE HACKED AT HOME TOO.

Your home is your castle, and it requires cyber security protection, just like your office.

If you live in the highest crime state in the US, you have a 6 in 100,000 chance of a home invasion sometime this year. That's a 0.06% chance of a home invasion.

If you connect your home to the Internet, that probability increases to nearly 100%. Why? Botnets are automated tools that run through the internet, 24x7, 365 days per year, touching every publically exposed computer, and automatically infecting those found vulnerable and unprotected.

### STEP 1: IN HOME VISIT

A Trusted Internet Virtual Chief Information Security Officer will install a firewall and security softeware in your home.

### STEP 2: 24X7 MONITORING

When your Virtual CISO™ leaves, your home will be monitored and protected, 24x7.

### STEP 3: INCIDENT RESPONSE

In most cases, if we see a cyber threat,we can stop it. If we find something infected, we can fix it. We have several options for keeping your computers clean, and your family safe.
